Results-driven **Full-Stack & Mobile Developer** specializing in building high-performance cross-platform applications and integrated digital systems. Proven track record in the local ecosystem, including leading a development team to win **1st Place at the University of Hargeisa Hackathon** with a custom mobile mobility MVP. Expert in integrating robust backend APIs, building data-driven analytics engines, and managing full application lifecycles. Highly adaptive professional merging deep mobile architecture foundations with Flutter-driven digital channel operations.

TECHNICAL SKILLS.

- **Mobile & Digital Channels:** React Native (Expert), Flutter (Core Architecture & UI Development), USSD Integrations, API Management
- **Web Development & CMS:** React, Next.js, HTML5, CSS3, Tailwind CSS, Modern CMS Platforms
- **Backend & Integrations:** Node.js, Nest.js, Express, RESTful APIs, System Architecture & Integrations
- **Databases & Tools:** PostgreSQL, MongoDB, SQLite, Supabase, Git, Postman, Vercel, Render
- **Analytics & Operations:** Data Visualization Engines, Performance Reporting, System Monitoring, Quality Assurance

PROFESSIONAL EXPERIENCE

Frontend / Full-Stack Developer | Somaliland Voting Management System

Aug 2024 – Oct 2024

- **Somaliland Voting Management System (Aug 2024 – Oct 2024):** Redesigned a complex election dashboard tracking 10 political parties across 6 regions, successfully eliminating data overload issues.
- **UI/UX Optimization:** Introduced a collapsible sidebar architecture to significantly improve layout scalability and mobile responsiveness across digital platforms.
- **Data & Analytics Integration:** Transformed static data tables into interactive visualizations (histograms and geographic maps) to deliver real-time insights and streamline performance reporting.
- **Dynamic Filtering:** Enabled stakeholders to dynamically filter results by region, drastically improving platform clarity and administrative decision-making speed.

Volunteer Instructor | Full-Stack Course

May 2023 – April 2024

- **Talent Pipeline:** Mentored a cohort of university students, resulting in **80% of participants** successfully deploying their first full-stack application to production.
- **Curriculum Design:** Translated complex architectural concepts (React lifecycle, RESTful APIs) into a handsome curriculum focused on "industry-ready" coding standards.

ACHIEVEMENTS & PROJECTS

1st Place Winner | Hargeisa University Hackathon

Technologies: React native, ExpressJs & PostgreSQL

- **Hackathon Champion:** Led a cross-functional team to build and deliver a full-stack university ride-sharing platform in 48 hours, securing **1st Place** among 8 competing teams.
- **End-to-End Development:** Designed and developed a React Native mobile application, React-based admin dashboard, and Express.js REST API supporting students, drivers, and system administrators.
- **Transportation Management:** Implemented ride booking, driver assignment, route and schedule management, real-time notifications, and booking cancellation to improve campus transportation efficiency.
- **Scalable Architecture:** Built secure REST APIs with JWT authentication, role-based access control, Socket.io real-time communication, and a relational database supporting operational reporting and analytics.

Independent Software Engineer | RoomSnap Chat Application (2026)

Technologies: React Native, Expo, Node.js, TypeScript, PostgreSQL, Upstash Redis, Socket.io, Cloudflare R2, Railway

- **Production Deployment:** Architected and deployed a full-stack, real-time chat platform for Android, utilizing a modern mobile-first stack and scalable cloud infrastructure.
- **Scalable Architecture:** Built a cost-efficient backend utilizing Railway for API hosting, Neon PostgreSQL for data persistence, Upstash Redis for caching, and Cloudflare R2 for optimized media storage.
- **Real-Time & Security:** Implemented secure OTP authentication, managed multi-room configurations, and built real-time messaging using Socket.io with admin-only media broadcast and deletion controls.
- **Performance Optimization:** Enhanced mobile UX by implementing lazy loading, Cloudflare-delivered image thumbnails, blurred placeholders, and optimized media rendering.
- **Mobile Delivery & CI/CD:** Configured EAS Build and EAS Update pipelines to streamline Android APK compilation and deliver seamless over-the-air (OTA) updates.
- **Client Licensing:** Successfully negotiated and structured a commercial licensing agreement, delivering a production-ready APK to the client while fully retaining source code ownership.
- **Production Impact:** Maintained 100% application reliability while supporting active user traffic during the client's peak operational cycle.

Agri-Teach Logistics & Inventory MVP (Freelance)

Technologies: Next.js, Node.js, PostgreSQL

- **Enterprise Development:** Designed and developed a multi-role egg management system for Admin, Warehouse, Farmer, Quality Checker, and Salesman operations.
- **Business Operations:** Built complete workflows for egg orders, warehouse inventory, sales management, distribution, and operational reporting.
- **Quality Management:** Implemented quality inspection and product replacement workflows with proof image uploads and approval processes.
- **Role-Based Platform:** Developed secure role-based dashboards, authentication, permissions, and business workflows for different user types.
- **Reporting & Analytics:** Created sales reports, inventory tracking, and operational dashboards to support business decision-making.
- **Software Engineering:** Applied TypeScript, modular system architecture, and backend testing practices to improve scalability, maintainability, and reliability.

- **Project Experience:** Successfully completed the system according to client requirements. Although the commercial agreement was not finalized, the project strengthened my expertise in enterprise software development, system design, and client collaboration.

Rent House Management System (Kiro Dhow) | Full-Stack Developer

Technologies: React, Node.js, Express, Knex.js, MYSQL

- **Enterprise Development:** Designed and engineered a complete property rental lifecycle platform orchestrating end-to-end operations for Tenants, Landlords, and System Administrators.
- **Business Operations:** Built core transactional workflows handling property listings, lease booking agreements, rent payment tracking, and cron-scheduled background tasks for billing cycles.
- **Maintenance & Operations:** Implemented a centralized maintenance ticketing system allowing tenants to submit issues with file attachments, paired with landlord resolution tracking status flows.
- **Real-Time Communication:** Integrated a secure messaging engine utilizing Socket.io web sockets to facilitate instant landlord-tenant communication, including unread message counters and real-time alerts.
- **Role-Based Security:** Developed distinct, secure dashboards protected by JWT-based session management, ensuring strict isolation of administrative controls, landlord portfolios, and tenant data.
- **Software Engineering:** Applied environment-agnostic database schemas using Knex.js migrations, maintaining clean architectural parity between local development (SQLite3) and production environments (MySQL).

EDUCATION

Bachelor of Science in Computer Science | University of Hargeisa

- 2020 – 2024

Full-Stack Bootcamp | Gabi School

- April 2021 – Oct 2022

HTML CSS & JS | JHuniversity Coursera

- Feb 2021
